

PROFESSIONAL SUMMARY

Analytical Data Analyst with hands-on experience building dynamic Power BI dashboards and implementing accelerated data science workflows. Proficient in transforming raw data into actionable insights through ETL processes, predictive risk modeling, and advanced Python/R analytics. Strong algorithmic problem-solver skilled at bridging the gap between complex data processing and clear, executive-level visual reporting.

TECHNICAL SKILLS

Languages	Python, SQL, Java, C++
Frameworks & Libraries	Pandas, NumPy, Scikit-Learn, Matplotlib, TensorFlow, Streamlit, Flask
Tools	MS Word, PowerPoint, MySQL, PowerBI, Tableau
Platforms	Jupyter Notebook, Visual Studio Code, PyCharm
Soft Skills	Documentation Work, Rapport Building, Excellent Communication

PROJECTS

- **SurgePricing - Real-Time Dynamic Pricing and Analytics Engine** [REPO](#)
Python, Google BigQuery, Power BI, SQL, Pandas, NumPy *July 2026*
Developed an end-to-end prescriptive data operations pipeline using Google BigQuery, Python, and Power BI to ingest real-time web clickstream logs and automatically optimize product pricing matrices. Implemented rolling time-series window aggregations in BigQuery SQL to evaluate live traffic velocities and stock scarcity indexes, and engineered a custom Sigmoid-based mathematical optimization script in Python to execute live database write-backs, successfully tracking a quantified 274.57 revenue lift via an executive Power BI dashboard control center.
- **E-Commerce Buddy: Real-Time Product Recommendation and Predictive Analytics** [REPO](#)
Python, Scikit-Learn, FastAPI, PostgreSQL, AWS Lambda, Docker *March 2026*
Engineered a scalable, production-grade machine learning pipeline for an e-commerce platform to deliver real-time personalized product recommendations and user behavior forecasting. Built data pre-processing and feature engineering pipelines using Pandas and Scikit-Learn to compute user-item interaction matrices, and deployed low-latency inference endpoints using FastAPI hosted on AWS Lambda serverless microservices. Integrated a structured PostgreSQL database layer to securely track live customer clickstream histories, improving downstream conversion metrics through data-driven prediction models.
- **PulseFlow - Real-Time Clinical Telemetry Dashboard** [REPO](#)
Streamlit, Python, Pandas, Real-Time Data Streaming, Algorithmic Risk Engine *November 2025*
Enhanced a production-grade, end-to-end data analytics web application using Streamlit and Python to simulate high-frequency physiological telemetry vectors Heart Rate, SpO2, Systolic BP from ICU bedside monitors. Engineered an automated rule-processing engine executing composite evaluations based on the clinical Modified Early Warning Score (MEWS) standard to flag critical patient deterioration signatures instantaneously. Integrated a dynamic state engine with built-in auto-recovery intervention thresholds while displaying live operational data flows through a responsive interactive dashboard.

RESEARCH

- **Lightweight Plant Disease Prediction Model using Custom CNN** [Research Paper](#)
Python, TensorFlow, Keras, TensorFlow Lite, Computer Vision *October 2024*
Engineered a lightweight custom CNN integrating attention mechanisms and progressive convolutional layers to classify plant pathologies across 38 distinct classes. Developed a robust data augmentation pipeline to train the model on 85,000+ images, achieving a 96.84% validation accuracy with optimized dropout regularization. Converted the final framework into TensorFlow Lite, enabling efficient edge deployment on mobile devices for real-time field diagnostics with under 1-second latency.

EDUCATION

VIT Bhopal University , Sehore, MP	Sept 2023 – Jan 2027
Bachelor of Technology – Computer Science & Engineering (AI/ML)	GPA: 8.89
Apeejay School, Panchsheel Park , New Delhi, India	July 2021
Senior School Certification Examination (Class 12 Boards)	Score: 92%
Apeejay School, Panchsheel Park , New Delhi, India	April 2019
Secondary School Certification Examination (Class 10 Boards)	Score: 92%

CERTIFICATIONS

- **Introduction to Machine Learning – NPTEL (IIT Madras)** **Score: 66%**
Elite Certification. During the NPTEL Introduction to Machine Learning course, I gained a comprehensive understanding of core supervised and unsupervised algorithms, covering foundational math, optimization techniques, and feature engineering. I also improved practical skills in building, evaluating, and tuning predictive models using real-world datasets to solve complex data-driven problems.
- **Introduction to Marketing Analysis – NPTEL (IIT Madras)** **Score: 97%**
Elite + Gold Certification — Top 5% of certified candidates. Mastered core quantitative methods to analyze customer data, evaluate market trends, and measure campaign effectiveness. Developed practical skills in using data-driven metrics to optimize product positioning, pricing strategies, and marketing ROI.
